Summary

I am a dedicated B.Tech student specializing in Computer Science with a focus on Artificial Intelligence. With strong foundations in programming languages like C, C++, and Python, and a solid understanding of data structures and algorithms, I have successfully developed projects, including an IoT-based weather monitoring system. I am eager to apply my skills in a collaborative environment to tackle innovative challenges

Skills

Gmail • GitHub • Python • C/C++ • HTML • Data Structures • OOP • Visual Studio Code • Git • JAVA • CSS • JavaScript

Education

GL Bajaj Institute of Technology and Management B.Tech in Computer Science (AI)	Greater Noida, Uttar Pradesh 08/2024
Sarla International Academy Senior Secondary (Class XII)	Basti, Uttar Pradesh 04/2011 - 05/2023

Projects

Weather Monitoring System (IoT-Based)	11/2025 - 01/2026
---------------------------------------	-------------------

An IoT-based solution for monitoring weather conditions

- Developed an IoT-based weather monitoring system to measure real-time temperature and humidity
- Integrated DHT11 sensor with Arduino for continuous environmental data collection
- Programmed the microcontroller using Embedded C/C++ for real-time sensor communication
- Transmitted data to ThingSpeak cloud platform for remote monitoring and visualization

ScholarBot – AI-Powered Smart Learning Assistant (In Progress)

Tech Stack: React.js, Node.js, Express.js, Gemini AI API, Supabase

- Built a full-stack AI-powered learning platform for doubt solving and study assistance.
- Integrated Gemini AI with resilient retry/fallback handling and study-tool generation.
- Developed REST APIs, chat persistence, and user activity tracking features.

Git Date Pusher

Tech Stack: Python, GitPython

- Built a command-line tool to automate Git commits with customizable timestamps.
- Implemented automatic commit message generation, branch detection, and repository integration.
- Added dry-run support and commit summary reporting to improve workflow reliability.
